This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently amended): A drawer panel for the front end of a drawer, the panel comprising:

an elongated wall having a front surface ~~side~~ and a rear surface ~~side~~,

a projection on the wall and having a base portion extending rearwardly from the rear surface ~~side~~ of the wall and an attachment portion integral with the base portion and extending substantially parallel to ~~along~~ the rear side of the wall for cooperation with the rear surface ~~side~~ of the wall to define ~~a~~ an open-ended channel therebetween, and

a drawer pull at the front surface ~~side~~ of the wall.

Claim 2 (Original): The drawer panel of claim 1, wherein the panel is of unitary one-piece construction.

Claim 3 (Cancelled)

Claim 4 (Currently amended): The drawer panel of claim 1, wherein the wall includes a first portion extending substantially parallel to a ~~the~~ first plane and a second portion extending substantially parallel to the second plane inclined with respect to the first plane.

Claim 5 (Currently amended): The drawer panel of claim 1, wherein the projection is a first projection, and further comprising a second projection on the wall and having a base portion extending rearwardly from the rear surface ~~side~~ of the wall and an attachment portion integral

4

with the base portion of the second projection and extending therefrom along the rear <u>surface</u> <s>side</s> of the wall for cooperation with the rear <u>surface</u> <s>side</s> of the wall to define a second channel therebetween.

Claim 6 (Currently amended): The drawer panel of claim 5, wherein one of the first and second projections includes portions cooperating with the rear <u>surface</u> <s>side</s> of the wall to define channels respectively opening in opposite directions.

Claim 7 (Currently amended): The drawer panel of claim 6, wherein <s>the</s> one <u>of the first and second projections</u> <s>projection</s> is substantially T-shaped in transverse cross section.

Claim 8 (Original): The drawer panel of claim 1, wherein the channel extends the entire length of the wall.

Claim 9 (Original): The drawer panel of claim 1, wherein the drawer pull projects forwardly of the wall.

Claim 10 (Original): The drawer panel of claim 9, wherein the drawer pull extends the entire length of the wall.

5

Claim 11 (Currently amended): A drawer comprising:

a drawer body including a bottom wall and a peripheral wall structure extending upwardly from the bottom wall;

mounting structure on the peripheral wall structure ~~and~~ including a base portion projecting forwardly from the peripheral wall structure and an attachment portion projecting from the base portion ~~and extending above and/or below the base portion~~; and

a front panel including an elongated panel wall having a front <u>surface</u> ~~side~~ and a rear <u>surface</u> ~~side~~,

~~and~~ a projection on the panel wall ~~and~~ having a base portion extending rearwardly from the rear <u>surface</u> ~~side~~ of the panel wall and an attachment portion integral with the base portion and extending therefrom <u>substantially parallel to</u> ~~along~~ the rear <u>surface</u> ~~side~~ of the panel wall for cooperation with the rear <u>surface</u> ~~side~~ of the panel wall to define ~~a~~ <u>an open-ended</u> channel therebetween,

the attachment portion of the mounting structure being slidably receivable in the channel of the front panel for mounting the front panel on the drawer body in a mounted condition extending across a front end of the drawer body.

Claim 12 (Original): The drawer of claim 11, wherein the attachment portion of the mounting structure is frictionally retained in the channel.

Claim 13 (Original): The drawer of claim 12, wherein the front panel is crimped to the mounting structure.

6

Claim 14 (Currently amended): The drawer of claim 11, wherein the projection is a first projection, the front panel further including a second projection on the panel wall including portions cooperating with the rear surface ~~side~~ of the panel wall to define a second channel therebetween.

Claim 15 (Currently amended): The drawer of claim 14, wherein at least one of the <u>first and second</u> projections includes portions cooperating with the rear <u>surface</u> ~~side~~ of the panel wall for forming two channels therebetween respectively opening in opposite directions.

Claim 16 (Currently amended): The drawer of claim 11, wherein the attachment portion <u>of the mounting structure</u> includes a folded under portion.

Claim 17 (Currently amended); The drawer of claim 16, wherein the folded under portion overlies and contacts another portion of the attachment portion <u>of the mounting structure</u>.

Claim 18 (Original): The drawer of claim 11, wherein the drawer body has an open front, the front panel closing the open front of the drawer body.

Claim 19 (Withdrawn): The drawer of claim 11, wherein the peripheral wall structure includes a front wall, the front panel being mounted on the front wall.

7

Claim 20 (Original): The drawer of claim 11, wherein the peripheral wall structure includes two side walls, the mounting structure including portions projecting from each side wall.

Claim 21 (Currently amended): A method of making a drawer comprising:

providing a drawer body with mounting structure including a base portion projecting forwardly from a front end of the drawer body and an attachment portion projecting from the base portion ~~and extending above and/or below the base portion~~,

providing a drawer panel including an elongated panel wall having a front <u>surface</u> ~~side~~ and a rear <u>surface</u> ~~side~~ and a projection extending from the rear <u>surface and having a portion</u> <u>extending substantially parallel to the rear surface</u> ~~side~~ and cooperating therewith to define ~~a~~ <u>an</u> <u>open-ended</u> channel therebetween, and

slidingly inserting the attachment portion of the mounting structure in the channel of the drawer panel and sliding the panel therealong until the panel reaches a mounted position extending across the front end of the drawer body.

Claim 22 (Original): The method of claim 21, and further comprising crimping the panel to the mounting structure when the panel has been moved to its mounted position.
